

INTRODUCTION: 67697 is a coherent, glassy, vesicular breccia containing a few small white clasts (Fig. 1). It is a rake sample collected 30 m east of the White Breccia boulders and appears to lack zap pits.

PROCESSING AND SUBDIVISIONS: 67697 was originally the third largest of four fragments numbered together as 67629, and now renumbered 67629, 676957 67696, and 67697.
